Extensive **dicomPACS**[®] installation at a Latvian hospital

The hospital in Jekabpils, situated 150 km from the capital Riga, was completely refurbished during the past year and is now equipped with the most up-to-date technology in all departments. As many as five new operating theatres were established during the refurbishment process. The hospital boasts 350 beds and employs 65 doctors – seven doctors are on stand-by for 24-hour emergency service. In the summer of 2009, OR Technology implemented the digitalisation of the X-ray department in cooperation with its Latvian distribution partner. A Siemens CT unit, three CR systems, three ultrasound units and two C-arm X-ray systems were integrated. The **dicomPACS**[®] webserver controls image distribution via the intranet.

**Dr Igors Malikovs, head of the radiology department,
comments on digital X-ray imaging with *dicomPACS*[®]**

“We are very happy about changing over from analog to digital imaging in our department. Initially, we were a bit concerned about how this change-over could be implemented without interfering too much with our daily work routine. Now that the system has been installed successfully, we know that this worry was unfounded. The entire change-over was effected in a most professional way without us having to cancel any examinations.

Dr Igors Malikovs

The greatest benefit for us is the DICOM worklist integrated in the PACS and RIS. Now imaging requests can be sent from all of our three reception desks to the respective diagnostic unit – fast and easily, avoiding many mistakes that used to happen in the past.

In addition, we save costs since we don't have to print out images any more. Our printing volume now amounts to only 10 % of what it was previously.”

Dr Ivars Zvidris

Dr Igors Malikovs comments on the *dicomPACS*[®] Webserver:

„We use the webserver at 30 workstations in all our departments and at a few home offices. All the doctors who are involved in the evaluation of an examination or require access to the images, can keep themselves informed without delay. In the past that could take up to several days. Calling up images via the webserver is so easy that some of our doctors use this access from home when they are on call-up. We've had emergencies when the radiologist was able to make a diagnosis from his home office within a few minutes. Prior to the change-over, when X-ray images were only available on film, such fast evaluation was an impossibility.“

The director of the hospital of Jekabpils, Dr Ivars Zvidris comments on the decision for *dicomPACS*[®]:

“The Latvian health system is currently experiencing great difficulties. In such difficult times it is essential for hospitals to be up to date in terms of technology. Our investment into digital X-ray imaging gives our hospital in Jekabpils the edge in a competitive market. An increase in diagnostic quality coupled with cost efficiency was of utmost importance for us. After having looked at various installations offered by other firms, we decided on OR Technology's *dicomPACS*[®] and webserver solution. The comprehensive offer and the good price-performance ratio won us over.“

Innovative image management solutions

Nowadays, diagnostic investigation with the help of digital image solutions plays an important role in the daily work of each modern practice or hospital. As the use of these modern technologies will continue to increase during the next few years, we would like to give you an understanding of our PACS software **dicomPACS**.

dicomPACS is an innovative and intelligent high tech solution for image processing as well as practice and hospital management; with the help of **dicomPACS** a paperless daily working routine can become reality.

All types of images (X-rays, CT, MRI, digital camera, ultrasound) as well as all kinds of documents (doctors' letters, diagnoses, recovery processes, faxes) can be acquired, diagnosed and then filed in the digital patient file with **dicomPACS**, only one mouse click away.

We guarantee quick access to all data under the highest international security standards with our well designed archive and backup solutions. Moreover, **dicomPACS** can be integrated effortlessly with management systems via HL7 or BDT/GDT communication or using an individual solution.
