

"Go-anywhere" X-ray system

Developed entirely by OR Technology, the fully digital **Amadeo M mini** X-ray system incorporates a sophisticated design which reduces components to the most essential, functional operating elements. The **Amadeo M mini** is therefore particularly suitable for portable use and can easily be transported due to its low weight (approx. 68 kg) and compact build. The new system is attractive wherever it is not possible to move patients to a hospital for diagnostic radiology. Areas of application are first aid services, home care, nursing homes, medically oriented aid organizations, military purposes and ships or oil rigs. The lightweight system can easily be pulled over steps and obstacles and can be swiveled in all directions – a huge advantage in confined spaces and elevators. The X-ray system is stable and does not tip over on uneven terrain. Its large, all-terrain wheels permit effortless movement. The **Amadeo M mini** includes all necessary components of a functional system: X-ray detector, X-ray generator and image processing workstation. The latter is delivered with a globally proven software package **dicomPACS® DX-R** which includes a convenient X-ray positioning guide for fine adjustment (except AX-version).

A special promotional video clip describing the new system can be found on YouTube.
