

Leonardo DR III compact: Compact X-ray solution with smart data connection

Mobile, connected and precise – anywhere in the field

15 October 2025: With the new Leonardo DR III compact, OR Technology introduces a mobile X-ray solution designed specifically for the requirements of equine medicine. The compact suitcase system combines maximum flexibility with state-of-the-art technology and ensures seamless workflows directly at the patient's side.

The Leonardo DR III compact is compact and always ready – easy to transport and ready for use within minutes, whether in the stable or out in the field. Its integrated mobile data connection is a key advantage: images can be uploaded instantly, shared digitally and forwarded for real-time remote consultations.

Through the *ORCA@Cloud*-PACS connection, veterinarians have access to their images anytime and anywhere, can share reports and collaborate flexibly with colleagues or clients.

The system is complemented by a smart energy concept, ensuring reliable operation throughout the entire day.

Proven image processing technology delivers crisp, instantly available images – enabling precise diagnostics without delay. With this, the Leonardo DR III compact unites mobility, connectivity and image quality in one powerful solution.
